

The Zurich Master Trust Fund Guide

Investing your money
with confidence

Allow us to introduce ourselves.

We are Zurich. We are part of a global insurance group with Swiss roots. We are one of Ireland's most successful life and pension providers.

We believe in building a life long trust with our customers.

We are passionate about protecting our customers and the things they truly value.

At Zurich, you are at the heart of what we do.

This guide is designed to give you a clear understanding of the investment choices available to you. If you have any questions please get in touch.

Talk to a financial broker, advisor or call us today and see how we can help you.

Welcome

Your employer has agreed to participate in the Zurich Master Trust (the “Scheme”) established by Zurich Life Assurance plc (Zurich Life) to provide you with an opportunity to save for your retirement in a convenient and tax-efficient manner.

This guide informs you about the investment choices available and how they work. It contains information about Zurich investment funds, funds available from other managers and pension lifestyle strategies. It should be read in conjunction with the relevant member booklet.

If you are not sure which investment funds are suitable for you, or if you are not confident in making a decision, then you should contact your Financial Broker or Advisor.

How do you feel about investment risk and reward?

It is important to decide how you feel about risk and reward before you make an investment. Your aim should be that over the long term any investment you make will go up in value.

But of course the value could also go down and, for high risk investments in particular, there is always the risk that your investment will be worth less than it was when you originally made it.

Find out what type of investor you are

You may have to accept some level of risk when you make an investment but how much depends on what you want to achieve. Only you know what your goals are and how much risk you are prepared to accept to reach them.

Deciding what you want to achieve with your investment is important because it will help you make decisions about where to put your money. Usually, your decision will be based on three things:

1. What do you want to achieve with your money?
2. What levels of investment risk are you comfortable with?
3. For how long would you be happy to invest your money?

Understanding your risk/reward profile

With your Financial Broker or Advisor, you can access the online **Zurich Risk Profiler**, which can help you understand more about investment risk and what levels of risk you feel comfortable with.

Zurich's risk profile categories

Once you answer the risk profiler questions, you will be categorised into one of the seven risk profiles. With the help of your Financial Broker or Advisor, you will then be able to choose investments that match your risk profile.

What options are available?

When you have decided what level of investment risk you are willing to take, you can think about which type of investment suits you.

Most people choose to invest in a 'fund' which means their money is pooled with other investors.

What is a fund?

A fund will typically invest in a portfolio of individual stocks and shares. The fund manager decides which types of investments will be held by the fund. There are four main types of asset classes (described on page 4 and 5) and it is important to understand which assets the fund you choose invests in. You also need to decide which type of fund management expertise you would like, active or passive.

Active Funds

Active funds, as the name suggests, are 'actively' managed by a fund manager. They will buy and sell investments with the intention of maximising gains and minimising losses. As the fund is actively managed, the fund managers can react to market situations and take advantage of insights and opportunities as they arise. Active funds aim to outperform the benchmark they are measured against.

Passive Funds

In contrast to active funds, a passive fund follows a different set of guidelines. Rather than trying to anticipate and identify growth opportunities, a passive fund will aim to mirror the performance of a particular stock market index.

Why choose to invest in a fund?

There are several advantages to investing in funds compared to choosing individual assets or investments:

- The fund manager picks investments for you.
- There is less administration as the fund manager does it all for you.
- It costs less than buying investments individually.
- You have more choice and, as part of a group of investors, you will get access to a wider range of investment opportunities.

Understanding a little more about what is in each fund can help you make choices that suit your goals, and your attitude to risk.

What is an asset class?

There are four main types of investment, which are often called 'asset classes'. Each one works in a different way and carries its own particular rewards and risks. It is important to understand how they work before you make any investment decisions.

- Cash: money on deposit (e.g. cash in a bank).
- Bonds: loans to companies or governments.
- Property: bricks and mortar, or property equities.
- Equities: investment in an individual company.

Fund managers buy and sell these asset classes on your behalf, hoping that their value will increase over time. The diagram below shows the higher or lower risks attached to the asset classes, and the potential to give higher or lower returns on your initial investment.

Cash

Cash funds invest in cash deposits, for example, in a bank account, or short-term (normally less than one year) near cash assets. In some circumstances, when interest rates are low, the returns on cash funds may be less than the charges on the fund. The returns on a cash fund may not keep pace with inflation, and they are not typically suitable for long-term investments.

Bonds

Many governments and companies borrow money from investors to raise funds and they do so by issuing securities known as 'bonds'. In return for the loan or bond, interest is paid to the investor until an agreed end date.

Funds holding bonds tend to produce lower but more stable returns than funds holding higher risk assets such as equities, but there is still a risk that these investments could go down in value.

There are many different types of bonds, from lower risk government backed bonds to higher risk bonds issued by companies. However, investing solely in bonds for the longer term may result in a lower return than equities. The rate of income on bonds will not keep pace with inflation unless they are index-linked. So, over time, if the rate of inflation is higher than the return generated by bonds, the real value of the bond could fall.

Property

Investing in commercial property is sometimes seen as an alternative to investing in equities and bonds. As well as aiming for capital growth on a property, rental income on property is also a source of return.

At times, the value of your investments in these funds could fall quite sharply. In more uncertain market conditions, it may be necessary to delay your exit from these funds.

Section 59AB of the Pensions Act requires Trustees to invest predominantly in regulated markets - based on this regulation the Trustees of the Zurich Master Trust have not made a fund available to members of the Zurich Master Trust which has direct property exposure.

Alternatives

Alternatives is a broad term that covers what could be considered 'non-traditional' investments. This means they wouldn't fall into one of the conventional definitions, such as equities or bonds. Alternative investments would include commodity investments such as gold, oil, or copper. Alternatives can help to provide further diversification to an investor's portfolio.

Equities

One of the most traditional ways to invest is to buy shares in a company, which form the asset class more commonly known as equities. Historically, equities have outperformed safer investments like cash and bonds and can act as the real driver for growth in your investment portfolio.

Direct investment in a single company can be risky, as you are reliant on the performance of just one company. Therefore, you may want to consider buying equities through an investment fund, which invests in a range of shares in different companies. Equity funds tend to focus their investment on various countries, regions, industries and investment styles as a way of diversifying, or spreading risk. There are a number of different types of equity funds, each with their own characteristics and riskiness.

Over time, a fund which invests mostly in equities is likely to offer greater potential for higher returns but with it comes greater changes in value. This is because equities are volatile in nature meaning their value can rise and fall quickly. While they carry the greatest risk, they may provide the greatest return over the long term (ten years or more).

If you choose to invest in funds with non-Euro assets, changes in exchange rates between currencies may also cause the value of your investments to rise or fall.

Managed and multi-asset funds

Some funds may invest in a mix of assets (for example, equities and bonds). These include managed and multi-asset funds. These funds allow you to invest in a range of assets, countries and market sectors, spreading your investment across many different companies and bonds. The fund manager is able to adjust the asset allocation of the fund in anticipation of changing market conditions.

Funds which specialise or concentrate their investment in specific regions, sectors (such as smaller companies or emerging markets) or in a smaller number of shares can result in greater fluctuations in value. Funds that invest in a wide range of sectors or shares generally carry less risk as they are well diversified.

Who will look after your investment?

When you put your money into a fund, it will be invested by a fund manager in the hope that it will grow over time. We believe that talented, experienced and well resourced fund managers are able to improve investment returns over the long term.

At Zurich, we offer you funds from an extensive range of global fund managers, including our own investment team, ensuring that you have a world-class choice of funds from which to choose.

Our investment team, based in Blackrock, Co. Dublin, is responsible for funds under management of approximately **€34 billion***. The most senior members of the investment team have been together for more than twenty years.

It is the close co-operation of our fund managers in making investment decisions across assets, sectors and markets that differentiates us from other fund managers. We have an integrated team-based investment process which ensures that we implement our investment strategy quickly and effectively.

We are active investment managers with a macro-economic approach, which is top-down and asset allocation driven. We construct our portfolios to allow us to take advantage of opportunities over all parts of the economic cycle. Zurich has an excellent reputation for investment performance and customer service.

Sustainability-related disclosures

Zurich's Pension, PRSA, Investment and Savings products offer a range of underlying investment funds which are managed internally by Zurich or by one of our external fund manager partners. These funds are classified as either Article 6 or Article 8 under Sustainable Finance Disclosure Regulation (SFDR). Only the funds that are listed as Article 8 below promote environmental or social characteristics and invest in companies with good governance practices, and the product you purchase will only promote environment or social characteristics if you remain invested in Article 8 funds for the duration of the holding period of the financial product. Further information as required by SFDR on these investments funds is available via the relevant hyperlinks below. The relevant Article 6 disclosures for the below funds are contained on the following pages.

The consideration of Principle Adverse Impacts on sustainability factors

The below statement relates to investment funds available on Zurich's products which are managed by Zurich's internal investment team. Information for external funds, including on whether and, if so how, their financial product considers principal adverse impacts on sustainability factors is available via the relevant hyperlinks.

Zurich's internally managed funds (with the exception of the Dividend Growth fund)

all consider the principal adverse impacts on sustainability factors. Principle adverse impacts can include indicators such as carbon emissions, board diversity, and corporate governance. These principle adverse impacts are considered via Zurich's Responsible Investment framework which applies to all internally managed funds, and is founded on the below pillars:

- ESG Integration
- Active Ownership (Voting & Engagement)
- Exclusions
- Carbon Ambition

Where applicable, information on principal adverse impacts on sustainability factors is available in the information to be disclosed pursuant to Article 11(2) (transparency of the promotion of environmental or social characteristics and of sustainable investments in periodic reports for any Art. 8 or Art. 9 SFDR products, respectively).

* The Article 8 Pre-Contractual documents for internally managed funds were updated in March 2023 to take account of the updated requirements in relation to fossil gas and nuclear energy investments

How sustainability risks are integrated into investment decisions.

Sustainability risks are environmental, social and corporate governance management risks (so-called “ESG” risks), which have the potential of negatively impacting the value of an investment.

Detailed information about our policies on the integration of sustainability risks in our investment decision-making process is available at www.zurich.ie/responsibleinvestment. The investments underlying this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

For funds managed by Zurich, sustainability risks are integrated into our investment decisions in the following ways:

ESG Integration

ESG integration can be a valuable input into investment analysis and security selection. It is a means to help highlight risks and to help ensure that the securities are priced accordingly. This represents a sound economic approach to investment. In order to regularly monitor sustainability risks and their effects on returns, we use data from a third-party data provider who have specialised in ESG information. Zurich sources ESG data from Morgan Stanley Capital International (MSCI), a third-party specialist data vendor. All of our in-house portfolio managers have access to ESG data on MSCI's ‘ESG Manager’ online platform. This information is also integrated directly into our security selection process via the Bloomberg system. Performing ESG integration is an incremental process and is another valuable metric in the active investment decision making process.

Active Ownership

Active management is more than just active selection, it is also about the concept of active ownership. As a shareholder, Zurich has a clear voting policy and exercises these voting rights actively to ensure

that companies are encouraged to focus on questions of long-term sustainability. Zurich actively executes voting across its entire portfolio of directly managed equity investments with agreed approaches across a wide range of issues such as corporate governance and other key ESG factors. We do this in a transparent way, and in the spirit of the Shareholder Rights Directive II, we fully publish our voting records on our website [here](#).

Selective Exclusions

There are certain situations where Zurich believes exclusions are justified. Hence, we do not engage in any business with, or directly invest in companies involved in the production of cluster munitions and anti-personnel landmines. Additionally, recognising the particularly harmful impact of coal on climate, we have begun excluding investments in thermal coal companies and have divested from equity holdings in companies that derive more than 30%¹ of their revenues from mining thermal coal, or utility companies that generate more than 30%¹ of their energy from coal.

Assessment of the likely impacts of sustainability risks on investment returns

We examine the effects of sustainability risks on the returns of unit-linked funds managed by Zurich. Zurich's responsible investment approach and ESG integration guidelines aim to avoid or reduce negative effects on investment returns as a result of the occurrence of sustainability risks. The diversification of asset classes can also lead to a reduction in sustainability risks.

Externally managed funds

Fund options are available on our products where the investments are not managed directly by the internal Zurich investment management team. Information on the integration of sustainability risks for these investments are detailed below:

Passive Funds

Within its fund range, Zurich offers a range of funds with a passive investment style. Rather than trying to anticipate and identify growth opportunities, a passive fund will aim to mirror the performance of a particular stock market index.

Zurich does not consider the integration of sustainability risks when selecting passive funds because these funds are designed to target the return on an index.

Active Funds

Zurich also partner with a number of global fund managers to offer funds across a variety of multi-asset and individual asset investment themes. When conducting due diligence on these underlying investments, a number of metrics and risks are considered. Zurich does not currently consider the integration of sustainability risks when selecting these funds. However, information on the underlying fund managers and their disclosures under the Sustainable Finance Disclosure Regulation can be found at the below links:

Self-Directed Products

In our “Self-Directed Products”, you can manage your pension fund investments yourself by selecting your own stocks, shares and other assets from the range we make available via one of our stockbroker partners. Within these products Zurich does not have any influence on the investments made and does not restrict access to securities based on sustainability risks. Therefore, there is no allowance or influence from Zurich in relation to the integration of sustainability risks with respect to these products.

¹ This has been updated in 2022 to reflect the enhancement of Zurich's exclusions policy.

Integrating sustainability preferences into the distribution process

Since August 2022, when carrying out the sale and distribution of Insurance Based Investment Products, insurance intermediaries and insurance undertakings are required to integrate a customer's sustainability preferences into the process. Known as the Insurance Distribution Directive (IDD), this applies to financial brokers/advisors and to Zurich's pension, savings, and investment products.

There are three categories in relation to these customer sustainability preferences:

- (a) Products that consider **principal adverse impacts** on sustainability factors
- (b) Products for which a minimum proportion shall be invested in sustainable activities according to SFDR
- (c) Products for which a minimum proportion shall be invested taxonomy-aligned

Under **category (a)** above, for funds managed internally by Zurich's investment management team (with the exception of the Dividend Growth Fund), principle adverse impacts are considered. Principle adverse impacts can include indicators such as carbon emissions, board diversity, and corporate governance.

Under **category (b)** and **category (c)** above, currently Zurich do not establish and/or report on the specific proportion of internally managed assets which meet the criteria to be defined as a sustainable investment according to SFDR or taxonomy aligned. Therefore, the percentage of assets within internally managed Zurich funds that invest in sustainable activities according to SFDR is reported as 0% and the percentage of assets within internally managed Zurich funds which are taxonomy-aligned is also reported at 0%.

Please note that the above information relates to IDD sustainability categorisations and are independent to any SFDR product classifications (e.g., Article 6, 8 or 9). Classifications for internally managed Zurich funds can be found separately in this document.

Information relating to IDD sustainability categorisations for externally managed funds can be found on the respective fund manager websites:

- BlackRock
- JP Morgan
- Dimensional
- Columbia Threadneedle
- Invesco

Personalised GuidePath – The Zurich Master Trust default

The most flexible investment strategy in the market.

Personalised GuidePath is an innovative investment strategy that provides greater flexibility, catering for different risk profiles and retirement benefit plans.

The Zurich Master Trust default investment strategy uses a “Medium” risk preference for the strategy “Growth” phase and a 25% Cash, 75% ARF split for the strategy “Retirement Planning” phase. More information on the Growth phase and Retirement Planning phase is provided below.

Personalised GuidePath makes your investment choices clearer and smarter. It is the first investment strategy in the Irish market which allows you to **personalise it in three ways** to suit your needs.

1 Personalised risk preference

By answering some simple questions you can understand your preferred level of risk from Low to High.

Once you have your risk profile, you can then adjust your investment strategy to match. This can be done online in a few easy steps.

2 Personalised retirement planning stage

It is likely that many customers will want to use their accumulated pension fund in different ways depending on their personal preferences.

There is no formula to predict what benefit mix an individual will choose at retirement – but with the right education and tools at your disposal, Personalised GuidePath makes the decision easy for you.

3 Personalised strategy end date

If you are planning on retiring early or late, Personalised GuidePath gives you the flexibility to adjust your 'strategy end date' at any stage over the course of your working life. This means your pension will de-risk to the date you are actually planning to take your benefits, regardless of whether it's earlier or later than your normal retirement date.

Unique online portal

Personalisation can be done online through a dedicated Personalised GuidePath portal, which is both educational and engaging.

You can personalise at the outset or at any stage before retirement. Zurich will also prompt you to go online and adjust your settings at key points in time.

In addition to Personalised GuidePath there are a number of other default investment strategies which apply to certain sections of the Zurich Master Trust. These relate to schemes which were administered by Zurich Life prior to the launch of the Zurich Master Trust which have now transitioned into the Zurich Master Trust. If one of these default investment strategies applies to you this will be outlined on the membership certificate in your new member pack. For further information on these alternative default investment strategies please visit the Personalised GuidePath section on www.zurichcorporate.ie

Other Ongoing Costs

These costs include costs incurred by investing in collective investment vehicles, costs incurred in the management, repair, valuation and maintenance of the assets of each Unit Fund and any other costs which have been charged to the Unit Fund. Dealing/transaction cost and stamp duties are not included.

If the costs shown are added to the annual management charge stated on your policy certificate, the resulting figure is comparable to a Total Expense Rates (TER) or to an Ongoing Charges figure (OCF) used by UCITs on their KIIDs. All costs shown in the table are already included within our quoted fund performance.

Example of total costs

If you have an investment policy with a product management charge of 1.00%, the following are the total ongoing costs that apply for a selection of funds:

• Cash = 1.00% • Balanced = 1.04% • World Equity (Dimensional) = 1.35%

The Other Ongoing Costs figures are based on our latest available data, and will vary over time.

Please note that fund risk ratings are recalculated periodically in line with European Securities and Markets Authority guidelines and may change over time.

¹ These are "two stage switch" funds, further details of which are available in your policy document from Zurich.
Annual Management Charges (AMC) apply.

Warning: The value of your investment may go down as well as up.
Warning: This product may be affected by changes in currency exchange rates.
Warning: If you invest in this product you may lose some or all of the money you invest.

Cash

1

Fund Description

The Cash Fund is invested in deposits and money market instruments, as well as short-dated fixed income securities issued by governments of the euro currency bloc. The cash fund is intended to be a low risk investment option which may not be appropriate for longer term investment due to the relatively low returns associated with low risk assets. Customers should consider their investment objectives prior to selecting this fund. There is no capital security in the fund and the value of the fund may fall if, for example, a bank that the fund has placed a deposit with cannot repay all or part of that deposit. The value of the fund may also fall if the charges applying to the fund are higher than the returns earned by the fund. The low risk associated with this fund is, in part, managed by diversifying the fund's assets across a range of counterparties which are subject to a minimum allowable credit rating. Further managing the risk associated with the fund, no non-euro exposure is permitted. This fund is managed by Zurich Life.

Fixed Term Funds

1

Fund Description

From time to time, Zurich may make a Fixed Term Fund available. These funds are designed to provide a fixed rate of return for a short period of time, normally a few years. The return is provided by investing the funds in an account provided by a bank. As monies are invested with a bank, there is counterparty risk. The return is provided by the counterparty on each fund and not by Zurich Life. The return of amount invested and interest will only be based on what Zurich Life receives from the bank. Where an encashment or fund switch prior to the maturity of the fund is made available, which is at the sole discretion of Zurich Life, the fixed return will not apply and the unit price will be calculated based on market conditions and the return you receive may be less than you originally invested. The fund is designed to provide a fixed return if held for the full period; It may not be appropriate for customers who intend to hold it for a shorter period. There is no guarantee that access to the fund is available prior to the maturity date of the fund. If customers do not remain in the fund for the full period, the return may be significantly lower than quoted and could be negative. Please ensure that you read the Key Features Document that corresponds with any Fixed Term Fund you are considering investing in.

Global Short-term Fixed Income (Dimensional)

2

Fund Description

The Global Short-term Fixed Income Fund (Dimensional) aims to maximise current income while preserving the value of investments. The fund is managed on a discretionary basis and invests in high quality debt such as bonds, commercial paper, bank and corporate debt. This debt is issued by governments, other public bodies and companies from developed countries and, at the time of purchase, this debt is generally rated at least AA- or Aa3 long-term by the major rating agencies. The fund will generally maintain an average maturity of its investments to five years or less. The fund may use derivatives to manage risk, reduce costs or improve returns.

Short Duration Corporate Bond

Fund Description	Investment Style
The Short Duration Corporate Bond Fund is an actively managed bond fund. It primarily invests in investment grade corporate bonds. The average duration of the bonds will typically be 1 to 3 years, but may extend down to 0 years or up to 5 years. It may also invest in supranational bonds and sovereign bonds. This fund may invest some of its assets outside of the eurozone subject to currency and duration exposure limits. Corporate bonds are subject to increased liquidity risk compared to sovereign bonds. This means that the fund may not always be able to sell its assets for full value, and this could significantly impact your returns if you exit or enter the fund at these times. As the fund is managed from the point of view of a euro investor any currency hedging that may be conducted will be into euros. This fund is managed by Zurich Life.	Active

Global Short-term Investment Grade Fixed Income (Dimensional)

Fund Description	Investment Style
The Global Short Investment Grade Fixed Income Fund (Dimensional) aims to maximise total returns from the universe of debt obligations in which the fund invests. The fund is managed on a discretionary basis and invests in investment grade debt instruments such as, without limitation, bonds, commercial paper, bank and corporate debt. This debt is issued by governments, other public bodies and companies from developed countries and, at the time of purchase, this debt is generally rated at least BBB- or Baa3 by the major rating agencies. In addition to investment grade instruments, the fund may invest in unrated instruments which are deemed to be of similar quality. The fund will generally maintain an average duration of its investments to three years or less. The fund may use derivatives to manage risk, reduce costs or improve returns.	Active

Prisma Low

Fund Description	Investment Style
Prisma Low is an actively managed fund which aims to achieve returns consistent with those available from investing across a diversified range of global asset classes – equities, short term bonds (government and corporate), medium term bonds (government and corporate) and cash. The strategic and tactical asset allocation strategies employed by the fund managers aim to deliver returns above prevailing Euro cash rates over time. This fund invests some of its assets outside the eurozone so a currency risk arises for a euro investor. As the fund is managed from the point of view of a euro investor any currency hedging that may be conducted will be into euros. This fund is managed by Zurich Life.	Active

The fund has a concentrated portfolio which leads to increased levels of stock specific risk. The fund offers the opportunity to invest in the US and may also have holdings in Canada and Latin America. In the future, the sectoral and equity selection of the fund may be varied to avail of changing market dynamics and so enhance the performance of the fund. For tactical reasons, the fund may also invest in cash or cash equivalents. This fund invests some of its assets outside the eurozone so a currency risk arises for a euro investor. As the fund is managed from the point of view of a euro investor any currency hedging that may be conducted will be into euros. This fund is managed by Zurich Life.	Active

Global Select (Columbia Threadneedle)

Fund Description	Investment Style
Indicative Equity Range: 100% of the value of the fund. The Global Select Fund (Columbia Threadneedle) aims to achieve growth through capital gains and income by investing in equities issued by companies worldwide. The 'Select' investment approach means that the fund has the flexibility to take significant stock and sector positions which may lead to increased levels of volatility. The fund has a concentrated portfolio which leads to increased levels of stock specific risk. The fund may invest in fixed interest securities and money market instruments, when deemed appropriate. This fund invests some of its assets outside the eurozone so a currency risk arises for a euro investor. This fund is managed by Columbia Threadneedle.	Active

American Select (Columbia Threadneedle)

6

Fund Description	Investment Style
Indicative Equity Range: 100% of the value of the fund. The American Select Fund (Columbia Threadneedle) aims to achieve growth through capital gains and income by investing in companies domiciled in North America or which have significant North American operations. These include smaller and emerging growth companies, those with potential for merger or takeover, those with new management recovery situations and exploration companies. There will be no particular sector specialisation. The 'Select' investment approach means that the fund has the flexibility to take significant stock and sector positions which may lead to increased levels of volatility. The fund has a concentrated portfolio which leads to increased levels of stock specific risk. On occasion, the fund may invest in fixed interest securities and money market instruments, when deemed appropriate. This fund invests some of its assets outside the eurozone so a currency risk arises for a euro investor. This fund is managed by Columbia Threadneedle.	Active

5★5 Asia Pacific

6

Fund Description	Investment Style
Indicative equity range: 80% - 100% of the value of the fund. The 5★5 Asia Pacific Fund is an actively managed fund which aims to achieve growth through focusing on Zurich Life's strong sector and stock selection skills in the Asia Pacific region, normally holding up to fifty equities in five different sectors. The fund has a concentrated portfolio which leads to increased levels of stock specific risk. In the future, the sectoral and equity selection of the fund may be varied to avail of changing market dynamics and so enhance the performance of the fund. For tactical reasons, the fund may also invest in cash or cash equivalents. This fund invests some of its assets outside the eurozone so a currency risk arises for a euro investor. As the fund is managed from the point of view of a euro investor any currency hedging that may be conducted will be into euros. This fund is managed by Zurich Life.	Active

Asia Pacific Equity

6

Fund Description	Investment Style
Indicative equity range: 80% - 100% of the value of the fund. The Asia Pacific Equity Fund is an actively managed fund which aims to achieve growth through capital gains and income from a well diversified portfolio of Asia Pacific equities and equity-based financial instruments. For tactical reasons, the fund may hold cash or cash equivalents. The fund has the scope to invest in the full universe of the Asia Pacific region, excluding Japan. This fund invests some of its assets outside the eurozone so a currency risk arises for a euro investor. As the fund is managed from the point of view of a euro investor any currency hedging that may be conducted will be into euros. This fund is managed by Zurich Life.	Active

Emerging Markets Opportunities (J.P. Morgan)

Fund Description	Investment Style
The Emerging Markets Opportunities Fund (J.P. Morgan) is a unit-linked fund that gives you the opportunity to participate in the performance of companies in emerging markets. The fund seeks to provide long-term capital growth by investing primarily in an aggressively managed portfolio with at least 67% of assets invested in equities of companies that are domiciled, or carrying out the main part of their economic activity, in an emerging market country. The fund may invest up to 20% in China A shares. The fund may invest in assets denominated in any currency and currency exposure may or may not be hedged. As a result, a currency risk arises for a euro investor. This fund is managed by J.P. Morgan.	Active

Indexed TopTech 100

Fund Description	Investment Style
Indicative equity exposure: 100% of the value of the fund. The Indexed TopTech 100 Fund is a unit-linked fund that gives you the opportunity to participate in the performance of some of the largest American and Global non-financial companies listed in the US. Information technology companies make up a significant proportion of the fund. The fund currently invests in an Invesco Exchange Traded Fund (ETF). The Invesco ETF is passively managed and aims to track an index, but may not track it exactly. Zurich Life reserves the right to replace this ETF with another fund at any stage. This fund invests some of its assets outside the eurozone so a currency risk arises for a euro investor. The unit-linked fund can have exposure to cash as part of the management of the fund.	Passive

Global Small Companies (Dimensional)

Fund Description	Investment Style
The Global Small Companies Fund (Dimensional) aims to achieve long-term total return. The fund is actively managed and invests in shares of companies listed on the principal stock exchanges in developed countries around the world. The fund invests in a broad and diverse group of smaller sized companies. No more than 20% of the fund's net assets will be invested in countries that are considered to be emerging markets. The fund may use financial contracts or instruments (derivatives) to manage risk, reduce costs or improve returns.	Passive

Global Value (Dimensional)

Fund Description	Investment Style
The Global Value Fund (Dimensional) aims to achieve long-term total return. The fund is actively managed and primarily invests in shares of companies listed on the principal stock exchanges of developed countries around the world. The fund invests using a value strategy, meaning it invests, either directly or indirectly, in shares of companies where, at the time of purchase, the Investment Manager believes that the share price is low compared to the accounting value of the company. No more than 20% of the fund's net assets will be invested in countries that the Investment Manager considers to be emerging markets. The fund may use financial contracts or instruments (derivatives) to manage risk, reduce costs or improve returns.	Passive

Global Sustainability Core Equity (Dimensional)

Fund Description	Investment Style
The Global Sustainability Core Equity Fund (Dimensional) aims to achieve long-term total return. The fund is actively managed and primarily invests in shares of companies listed on the principal stock exchanges in developed countries around the world. The fund's portfolio is generally overweighted in shares of smaller sized companies and value companies. Value companies are companies where, at the time of purchase, the Investment Manager believes that the share price is low compared to the accounting value of the company. The composition of the fund may be adjusted based on environmental and sustainability impact considerations. No more than 20% of the fund's net assets will be invested in countries that the Investment Manager considers to be emerging markets. The fund may use financial contracts or instruments (derivatives) to manage risk, reduce costs or improve returns.	Active
